Notes:

ABSTRACT

The abstract provides a good overview of the study's objectives and summarizes the key factors driving suburban development. However, it would benefit from explicitly stating the qualitative approach used and briefly highlighting the six main findings for better clarity.

INTRODUCTION

The introduction establishes the relevance of sustainable development and urban-suburban dynamics. However, the research problem is not clearly articulated. Explicitly stating the core issue—identifying the drivers of suburban expansion—would enhance the focus.

RESEARCH METHOD

The study employs a qualitative descriptive method using literature and document analysis.

Jl. Durung No. 85, Sidorejo Hilir, Kec. Medan Tembung – Kota Medan – Sumatera Utara – Kodepos 20222

While the methodology is generally well-described, it could be improved by specifying examples of documents or cases analyzed and explaining the triangulation process more clearly.

RESULTS AND DISCUSSION

The discussion is well-structured and covers all six identified factors. However, the narrative is largely normative and lacks empirical case studies or international comparisons. Including concrete examples of suburban development in Indonesia would strengthen the analysis.

CONCLUSION

The conclusion effectively summarizes the six factors influencing urban expansion. Still, it would be more impactful with practical recommendations or policy implications for regional planners and stakeholders.

REFERENCES

The references are relevant and include scholarly and regulatory sources. However, the list relies mostly on domestic literature. Adding international sources on sustainability and urban planning would improve the article's academic depth.
